

# **MOD**: MD07/B5-R2P

Production code: Ol070PSVND97BH

# Controllers for refrigerated cabinets, counters and islands

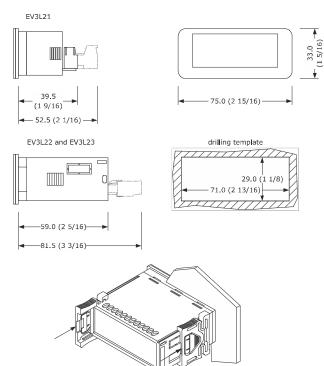

- Power supply 115 or 230 VAC (according to the model)
- Cabinet probe and evaporator probe (NTC)
- Door switch input.
- Compressor relay 16 A res. @ 250 VAC.

| Purchasing code | Relays | Probes (NTC) | Power supply |
|-----------------|--------|--------------|--------------|
| EV3L21N5        | 1      | 1            | 115 VAC      |
| EV3L21N7        | 1      | 1            | 230 VAC      |
| EV3L22N5        | 2      | 2            | 115 VAC      |
| EV3L22N7        | 2      | 2            | 230 VAC      |
| EV3L23N5        | 3      | 2            | 115 VAC      |
| EV3L23N7        | 3      | 2            | 230 VAC      |
|                 |        |              |              |

### MEASUREMENTS AND INSTALLATION

rements in mm (inches). To be fitted to a panel, snap-in brackets provided

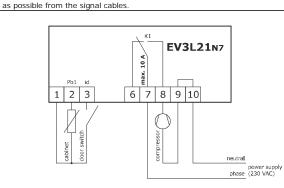

# INSTALLATION PRECAUTIONS

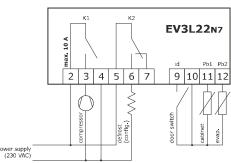

- The thickness of the panel must be between 0.8 and 2.0 mm (1/32 and 1/16 in) Ensure that the working conditions are within the limits stated in the TECHNICAL
- Do not install the device close to heat sources, equipment with a strong magnetic field,
- in places subject to direct sunlight, rain, damp, excessive dust, mechanical vibrations or shocks.
- In compliance with safety regulations, the device must be installed properly to ensure adequate protection from contact with electrical parts. All protective parts must be fixed in such a way as to need the aid of a tool to remove them.

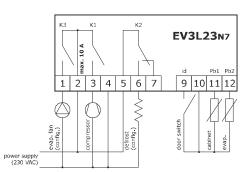

# 2 ELECTRICAL CONNECTION

Use cables of an adequate section for the current running through them. To reduce any electromagnetic interference connect the power cables as far away

#### PRECAUTIONS FOR ELECTRICAL CONNECTION

- If using an electrical or pneumatic screwdriver, adjust the tightening torque.
  - If the device has been moved from a cold to a warm place, the humidity may have caused condensation to form inside. Wait about an hour before switching on the
- Make sure that the supply voltage, electrical frequency and power are within the set limits. See the section TECHNICAL SPECIFICATIONS.
- Disconnect the power supply before doing any type of maintenance
- Do not use the device as safety device.
- For repairs and for further information, contact the EVCO sales network

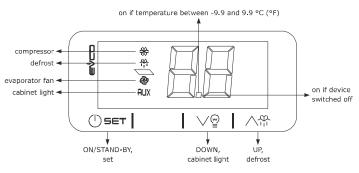

## 3 FIRST-TIME Install following the instructions given in the section MEASUREMENTS AND INSTALLA-

- Power up the device as shown in the section ELECTRICAL CONNECTION and an internal
- The test normally takes a few seconds, when it is finished the display will switch off. Configure the device as shown in the section Setting configuration parameters.

| ı |      | Recommended configuration parameters for first-time use. |                                 |                          |  |  |
|---|------|--|---------------------------------|--------------------------|--|--|
| I | PAR. | DEF.   | PARAMETER                       | MIN MAX.                 |  |  |
| I | SP   | 0  | setpoint                        | r1 r2                    |  |  |
| I | P2   | 0  | temperature unit of measurement | 0 = °C 1 = °F            |  |  |
| I | d1   | 0  | defrost type                    | 0 = electric 1 = hot gas |  |  |

Then check that the remaining settings are appropriate; see the section CONFIGURA-TION PARAMETERS.

- Disconnect the device from the mains.
- Make the electrical connection as shown in the section ELECTRICAL CONNECTION without powering up the device.
- Power up the device

## Switching the device on/off

( SET Touch the ON/STAND-BY key for 3 s.

If the device is switched on, the display will show the cabinet temperature; if the display shows an alarm code, see the section ALARMS

| LED | ON                | OFF                | FLASHING   |
|-----|-------------------|--------------------|--|
| *   | compressor on     | compressor off     | - compressor protection active<br>- setpoint setting active    |
| *   | defrost active    | -                  | <ul><li>defrost delay active</li><li>dripping active</li></ul> |
| @   | evaporator fan on | evaporator fan off | evaporator fan stop active                                     |
| AUX | cabinet light on  | cabinet light off  | cabinet light on by digital input                              |

If 30 s have elapsed without the keys being pressed, the display will show the "Lo" label and

# 4.2 Unlock keypad

Touch a key for 3 s: the display will show the label "Un".

# Set the setpoint

- that the keypad is not locked.
- Touch the ON/STAND-BY key Touch the UP or DOWN key within 30 s to set the value within the limits r1 and r2 (default "-40... 50") ⊕s∈⊤ Touch the ON/STAND-BY key (or do not operate for 30 s).

# Activate manual defrost

Check that the keypad is not locked

Touch the UP key for 3 s.

If P4 = 1 (default), defrost is activated provided that the evaporator temperature is lower than the d2 threshold.

# Cabinet light on/off (if u1 or u2 = 2)

Touch the DOWN key.
